

Production engineer building **Python/FastAPI backends, LLM agents, RAG and retrieval systems, AI-native delivery loops, and TypeScript full-stack products**. Strongest at turning ambiguous AI requirements into reliable production systems: APIs, async workflows, tool use, memory, structured outputs, evals, guardrails, observability, testing, CI/CD, and safe autonomous execution. Also experienced with payment orchestration, fintech workflows, multi-tenant SaaS, React/Next.js, Vue/Nuxt, Node/NestJS, PostgreSQL and cloud delivery.

TECHNOLOGY KEYWORDS

AI / LLM:	LLM applications · AI agents · agentic workflows · multi-agent orchestration · tool/function calling · MCP servers · RAG · retrieval · memory/context systems · structured outputs · prompt/version management · guardrails · human-in-the-loop · evals · regression testing · replay traces · model routing · retries/fallbacks · streaming · cost/latency controls · OpenAI · Anthropic Claude · Gemini · OpenAI-compatible APIs
Python backend:	Python · FastAPI · asyncio · Pydantic · SQLAlchemy · Alembic · Celery · REST APIs · WebSockets · background workers · event-driven systems · microservices · idempotency · transactions · concurrency · PostgreSQL · TimescaleDB · MongoDB · Redis · SQLite/FTS5 · NATS · Oracle
Web / full-stack:	TypeScript · JavaScript · Node.js · NestJS · Express · React · Next.js · Vue 3 · Nuxt.js · Pinia · Vite · Tailwind · TanStack Query (React adapter) · HTML/CSS · OAuth/SSO · JWT · RBAC · GraphQL (working experience)
Cloud / DevOps:	Docker · Docker Compose · GitHub Actions · CI/CD · AWS (S3, RDS, IAM, VPC) · GCP (Cloud Run, Cloud Storage) · Terraform · Kubernetes · Traefik · VPS · Prometheus · Grafana · Datadog · Sentry · Tailscale
Testing / delivery:	pytest · unit/integration/e2e testing · Playwright · CDP · property-based testing · mutation testing · smoke tests · load/performance testing · code review · Git · autonomous coding agents · Claude Code · Codex
Additional:	Rust · Go (working proficiency) · Java · C# / Unity · PHP / Laravel · Stripe · Telegram Bot API · aiogram · Telethon · Steamworks · blockchain settlement verification · LangChain/LangGraph concepts · vector search concepts

SELECTED PRODUCTION WORK

Animaya — Multi-tenant AI Agent Platform

- Founder / engineer · Python 3.12, FastAPI, PostgreSQL, Docker, Anthropic, MCP
- Built a platform for isolated assistants with persistent memory, custom tools, scheduled tasks, execution boundaries and explicit confirmation gates.
 - Operates at **50,000+ messages/day** with sub-500 ms response time on the core real-time path.
 - Autonomous delivery loop: GitHub issue → planner → implementer → PR → CI → deploy, with deterministic checks and human escalation for sensitive changes.

Seitiate — AI Memory & Retrieval Engine

- Engineer / contractor · Python, FastAPI, PostgreSQL, SQLite FTS5, MCP
- Built hybrid BM25 + FTS5 retrieval, cross-encoder reranking, synonym expansion, temporal chains and agent-facing MCP tools.
 - Scored **82.6% on LongMemEval**; implemented knowledge crystallization, trust tiers and bounded inference cost.

ADDITIONAL ENGINEERING WORK

73auto.com — Subscription SaaS

- Founder / sole engineer · Next.js, FastAPI, MongoDB, Stripe, Docker, GitHub Actions
- Live SaaS with Stripe credit packs and recurring subscriptions unified behind one entitlement check that fails closed.
 - Built authentication, billing portal, vehicle-data API integration, admin analytics and deployment verification end to end.

Real-time Market Data / WebSocket Pipeline

- Python, FastAPI, WebSockets, TimescaleDB, Redis, Prometheus
- Processed approximately 400 orderbook snapshots/sec for backtesting, under 100 ms latency and 99.8% uptime.
 - TimescaleDB compression reduced 35 GB/day of raw data to 1.7 GB.

PROFESSIONAL EXPERIENCE

Agent-Driven Developer / AI Systems Engineer — independent & contract work

- 2024–present · AI agents, Python, TypeScript, backend systems, automation
- Build and operate AI agents, memory systems, LLM workflows, testing/evaluation harnesses and full-stack products for real users.
 - Use Claude Code and Codex as engineering tools while owning requirements, architecture, review, security boundaries, tests and production outcomes.
 - Delivered 70+ Telegram bots and Mini Apps, backend APIs, payment integrations and AI-enabled product workflows.

Unity Developer / Game Designer — Tamashi Games

- 2022–2023 · C#, Unity, mobile games, team coordination
- Delivered mobile projects from prototype to App Store / Google Play; estimated timelines and risks and coordinated a small team.

Lead Developer & Game Designer — RedBoon, Knock on the Coffin Lid

- 2019–2022 · C#, Unity, Steamworks, systems design, analytics
- Led development of a shipped Steam deck-building roguelike: card/combat systems, progression, balance, sprint planning, code review, Steam API, tooling and analytics. The game reached Very Positive on Steam.

Java Developer — Axiom Software

- 2016–2019 · Java, JavaScript/Vaadin, PostgreSQL, Oracle, ORM · fintech banking tools
- Backend development for a financial taxonomy and banking tool, including database-backed business logic and ORM integrations.

CORE STRENGTHS

Production AI engineering	Python / FastAPI	LLM agents	RAG & memory	Agent evaluation	Backend architecture	Async systems	Payments & fintech	Multi-tenant SaaS
TypeScript / React	Node / NestJS	Vue / Nuxt	CI/CD	Observability	Security & RBAC	Product ownership		

EDUCATION & LANGUAGES

- Altai State Technical University** — Specialist degree in Information Security, 2008–2013
- Languages:** Russian (native) · English (professional working proficiency)
